

Automatic Systems

Innovative Peening Systems has over 15 years of shot peening and grit blasting machine building for many different industries. Automatic machines are commonly used for processing the same part or a family of similar parts during a consistent time period. Each machine is made from 3/8" thick steel plate, rigid urethane shot recovery, direct pressure or suction media delivery and a wide choice of part and nozzle manipulation.

Rectangle table machine processes structural parts.

Indexing turntable with batch processing.

Dedicated rotary lance with turntable and manual workstation.

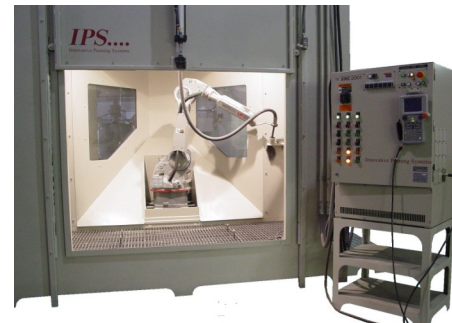

Long Rotary shaft with dual shot delivery

Indexing turntable with continuous processing.

Articulating robotic arm machine.
