

Semi-Automated Shot Peening Systems

Innovative Peening Systems

This semi-automated shot peen system is designed topeen a batch of parts on a revolving turntable. This process approach allows an operator to load a series of parts, close the door and then perform other tasks during the peening sequence. The programmable oscillator allows the operator to easily change part sizes without manual nozzle movement.

Machine Features:

- 1/2" steel plate construction
- Digital shot flow controls (optional)
- Variable speed table with
- Urethane shot recovery duct
- Multiple nozzle suction fed media delivery
- Reverse pulse dust collection
- Mechanical screen shot classifier
- 85 dba sound level at 50 PSI
- Programmable ball screw variable speed vertical oscillator
- Lined peening enclosure
- Powered vertical door
- PLC controlled

...because your part is the most important part
